

NETWORK INFRASTRUCTURE

CITN Limited offers secure online backup services to businesses and individuals throughout the UK and Europe. We are committed to ensuring the very highest availability of your backup data. We achieve this by operating from the very best, modern and secure Data Centres in Europe.

Our Primary Data Centre is located in Northampton and our Secondary Data Centre is in Greenham Common airbase, an ex-nuclear bunker with armoured, military grade, nuclear-proofed facilities.

Redundant internet connections ensure that we do not rely on one single company for internet connectivity, ensuring uninterrupted internet backup services to protect your data.

Both sites offer a secure, resilient environment for hosting customer data and are protected against infiltration. We also benefit from having Uninterrupted Power Supplies and generators to ensure continuous delivery of service in line with our industry leading SLA.
